

Task: Prompt Engineering

Task Requirements

Each group should:

1. **Search for a model** that is designed or suitable for a specific task.
2. **Identify the task** that the selected model can perform.
3. Design a **prompt** for the selected model using the prompt structure discussed in the session.

Possible Tasks

Examples of tasks that can be selected include:

- **Summarization** – summarize a long document into key points.
- **Text Classification** – classify customer messages into categories.
- **Question Answering** – answer questions based on provided context.
- **Information Extraction** – extract entities or specific information from text.
- **Translation** – translate text between languages.
- **Sentiment Analysis** – determine whether a text is positive, negative, or neutral.

Prompt Structure

The prompt should follow the structure covered in the session, including the relevant components such as:

- **Role / Persona**
- **Context**
- **Task / Instruction**
- **Constraints**
- **Examples** (when applicable)
- **Expected Output Format**

Deadline

Saturday – 11:59 PM
